LESSON 17. DIVISIBILITY. DIVISORS AND MULTIPLES OF AN INTEGER

3.35. Do the divisions:

a) $846 : (-6)$; b) $(-637) : (-13)$; c) $(-3\,030) : 101$.

_____

3.36. Find the divisors of 33 and of -70.

_____

_____

3.37. Find the non-zero multiples of 13 that are greater than -60 and less than 90.

_____

3.38. List the elements of the set $P = \{x \in \mathbb{Z} \mid x \vdots 4 \text{ and } -20 < x \leq 20\}$.

_____

3.39. Write the number 35 as a product of two integers in all possible ways.

_____

3.40. We know: if two integers a and b are both divisible by an integer c, then $a + b$ and $a - b$ are also divisible by c. Use this fact to find the integers x such that $x + 7$ is divisible by x (in other words: x is a divisor of $x + 7$).
